

Environmental Policy Statement

As a sustainable, responsible business we are committed to the protection of the environment and continual improvement of our environmental performance.

We operate an Environmental Management System in accordance with BS EN14001:2015 and have been accredited to this internationally recognised standard since October 2008.

We assess all our environmental aspects that may have an impact to our site and our local area, ensuring we maintain our good neighbour policy.

The senior management firmly believes in, and is committed to; monitoring and improving environmental performance, pollution prevention and environmental protection.

These aims will be achieved through

- Setting annual objectives and targets
- Comply with relevant environmental legislation, codes of conduct and commercial requirements
- Increase and encourage recycling by segregating waste
- To develop and maintain an environment management system that provides the means to set objectives and targets
- Communicating objectives to our contractors
